I hear you. The lab timing is at least part of the problem. Like you I'm super busy, but Erika and Kristen are hard at it.

No d/f data yet. Maybe we should all review the results ASSUMING d/f hits above RAL.

Importance: High

Hi Elly,

Just want to check in with you if LDWG has sent you the d/f data. Those data could be one of the key drivers to decide the footprint of active remedial actions especially in the vicinity of Rhone Poulenc. I think it's very important to include it during the Tier II sample selection discussion.

Also to let you know that I'm going to review the documents from Kathy today and plan to participate the discussion tomorrow. I wish LDWG could give us more time to review since there are a lot of information from those data that need time to think. I've been distracted by other work so much last week, and I hope I can concentrate on this today.

Thanks,

Jing Liu

Subject: Maps showing Tier 1 results and Tier 2 analysis recommendations

Hi Elly Please find attached the updated QAPP Addendum maps with the Phase II, Tier 1 results (in minty green) and the updated QAPP Addendum table with Phase II, Tier 2 recommendations. The color coding is similar to what we used in Phase I and a legend is provided at the start of the table. Orange-shaded samples are recommended for Tier 2 analysis.

I will walk you and your team through the color coding et al. tomorrow during the check-in meeting. In the meantime, we are FedExing you hard copy maps; you should have them by meeting time tomorrow.

We have two meetings scheduled for Tier 2 decision-making next week (September 28 and 30 at 10 AM). It would be great if you could provide us with your thoughts prior to the first meeting so we can focus our attention during those meetings on those samples. The last column in the table would be a great place to record any comments you have.

Just let me know if you have any questions along the way. I'm very happy to help and realize this is a lot to take in!

Thanks!
